*JLC Solutions* is proud to announce our new *Cablesaver* laser scanner holder with the exclusive cable management system.

*Cablesaver* is a laser scanner holder designed to protect the scanner gun and sensitive laser optics from falls and the lens from scratches. Unlike any scanner holder on the market today, the *Cablesaver* scanner holder adds our exclusive cable management system. This unique system draws the scanner's cable back to the holder.

The *Cablesaver* cable management system virtually eliminates the need to buy replacement cables due to over extending (repeated stretching beyond the limit of the cable length) and failures due to cable cuts and broken connection ends. *Cablesaver* will eliminate the possibility of USB connections becoming unplugged.

Made of durable, lightweight ABS plastic *Cablesaver* will withstand years of rugged industrial use and will fit all manufacturers' laser scanners. It is designed to be used on all types of material handling equipment or in any fixed mount position. *Cablesaver* is ideal for conveyor and pick-to-light installations.

The typical ROI for *Cablesaver* is less than one year. Extend the life of your scanners and reduce scanner repair and replacement costs.
